SmartCharging!

A very smart choice!
Always, wherever you are, in charge
over consumption and use

Easy installation, sustainable solar charging and Smart-home ready. SmartCharging! is the latest generation of charging solutions for hybrid and electric cars. You are ready for the future!

SmartCharging! consists of three components:

- Charging point with DC ground fault detection
- Smart WiFi module
- MyCharger App (iOS & Android)

The professional installs the WiFi module in the fuse box and simply clicks the charging station and power cable into place. Done! Ready to charge your vehicle!

With the Mycharger app, you can take advantage of convenient automatic functions. Charging during cheap off-peak hours, stop/start charging remotely and automatic invoicing.

The SmartCharging! solution is a safe and future-proof choice. It automatically switches the charging current down if other devices in your home or building require a lot of power.

SmartCharging!

ADVANTAGES SMARTCHARGING!

- Inexpensive to build in
- Easy installation
- Ready for the smart home
- Sustainable charging using (local) solar energy
- Consumption overview via the MyCharger app
- CE-approved, made in Europe
- Integrated, dynamic load balancing

CHARACTERISTICS CHARGING POINT

- Remote control via Modbus
- Built-in relay and kWh meter
- Option for built-in DC earth leakage detector
- Fully integrated electronics
- Low assembly costs through integration

WIFI MODULE FEATURES

- Integrated electronics in DIN rail housing
- CT clamps measure current
- Controlling charge points via modbus
- Up to 4 charging points
- Ethernet module
